

# NB Private Equity Partners Limited

28 February 2021<sup>1</sup>

## FUND OBJECTIVE

NB Private Equity Partners Limited (“NBPE” or the “Company”) invests in direct private equity investments alongside market leading private equity firms globally. NB Alternatives Advisers LLC (the “Investment Manager”), an indirect wholly owned subsidiary of Neuberger Berman Group LLC, is responsible for sourcing, execution and management of NBPE. The vast majority of direct investments are made with no management fee / no carried interest payable to third-party GPs, offering greater fee efficiency than other listed private equity companies. NBPE seeks capital appreciation through growth in net asset value over time while paying a bi-annual dividend.

## MANAGER COMMENTARY

During February, NBPE received \$7.7 million of proceeds in total, which consisted of the remaining \$4.0 million from the previously announced final sale of Avantor (NYSE: AVTR) public shares and \$3.5 million from income investments, consisting primarily of proceeds from the NB Credit Opportunities Program and NB Specialty Finance Program. In terms of new investments, NBPE funded \$2.5 million to its commitment to the NB Specialty Finance Program, a follow-on of \$0.4 million to one direct equity investment and NBPE received \$0.2 million from a return of capital.

The February monthly NAV update includes \$31.9 million of additional private company write-ups attributable to updated 31 December 2020 valuation information. This brings total quarterly valuation gains from 31 December 2020 financial information to \$70.8 million to date, inclusive of valuation write-ups already incorporated into the January monthly NAV update. These valuation increases have driven NAV growth to approximately 20.9% over the last twelve months in US Dollar terms and inclusive of dividends paid.

Approximately 17% of valuation information in this estimate is as of 28th February and 56% of valuation information is updated to 31 December 2020. Additional valuation information will be incorporated in future monthly NAV updates and NBPE expects to issue its audited financial report in April 2021.

## VALUATION METHODOLOGY

It is expected that most of the investments in which the Company invests will meet the criteria set forth under FASB ASC 820 Fair Value Measurement ("ASC 820") permitting the use of the practical expedient to determine the fair value of the investments. ASC 820 provides that, in valuing alternative investments that do not have quoted market prices, but calculate NAV per share or equivalent, an investor may determine fair value by using the NAV reported to the investor by the underlying investment. To the extent ASC 820 is applicable to an investment, the Manager will value the Company's investment based primarily on the value reported to the Company by the investment or by the lead investor of a direct co-investment as of each quarter-end, as determined by the investments in accordance with its own valuation policies.

The Company generally uses the NAV reported by the investments as a primary input in its valuation; however, adjustments to the reported NAV may be made based on various factors, including, but not limited to, the attributes of the interest held, including the rights and obligations, any restrictions or illiquidity on such interest, any potential clawbacks by the investments and the fair value of the investments' investment portfolio or other assets and liabilities. The valuation process for investments categorized in Level 3 of the fair value hierarchy is completed on a quarterly basis and is designed to subject the valuation of Level 3 investments to an appropriate level of consistency, oversight and review. The Investment Manager has ultimate responsibility for the valuation process and the fair value of investments reported in the financial statements. The Investment Manager performs initial and ongoing investment monitoring and valuation assessments. In determining the fair value of investments, the Investment Manager reviews periodic investor reports and interim and annual audited financial statements received from the investments, reviews material quarter over quarter changes in valuation, and assess the impact of macro market factors on the performance of the investments.

Debt investments made on a primary basis are generally carried at cost plus accrued interest, if any. Investments made through the secondary market are generally marked based on market quotations, to the extent available, and the manager will take into account current pricing and liquidity of the security. For primary issuance debt investments, the Manager estimates the enterprise value of each portfolio company and compares such amount to the total amount of the company's debt as well as the level of debt senior to the Company's interest. Estimates of enterprise value are based on a specific measure (such as EBITDA, free cash flow, net income, book value or NAV) believed to be most relevant for the given company and compares this metric in relation to comparable company valuations (market trading and transactions) based on the same metric. In determining the enterprise value, the Manager will further consider the companies' acquisition price, credit metrics, historical and projected operational and performance, liquidity as well as industry trends, general economic conditions, scale and competitive advantages along with other factors deemed relevant. Valuation adjustments are made if estimated enterprise value does not support the value of the debt security the Company is invested in and securities senior to the Company's position. If the principal repayment of debt and any accrued interest is supported by the enterprise value analysis described above, the Manager will next consider current market conditions including pricing quotations for the same security and yields for similar investments.

For investments made on a secondary basis, to the extent market quotations for the security are available, the Manager will take into account current pricing and liquidity. Liquidity may be estimated by the spread between bid and offer prices and other available measures of market liquidity, including number and size of recent trades and liquidity scores. If the Manager believes market yields for similar investments have changed substantially since the pricing of the security, the Manager will perform a discounted cash flow analysis, based on the expected future cash flows of the debt securities and current market rates. The Manager will also consider the maturity of the investment, compliance with covenants and ability to pay cash interest when estimating the fair value of debt investments.

## TRADING VOLUME

During the month of February, NBPE's aggregate trading volume on the London Stock Exchange and over-the-counter trading platforms was 677,748 Class A ordinary shares, which represents an average daily trading volume of approximately 33,887 Class A ordinary shares.

1. Figures provided are unaudited and subject to change. Certain numbers may not total due to rounding.
2. Other includes realised gains, investment income not classified as yield income, expenses, the ZDP liability and value changes to other assets, liabilities and shareholders equity.
3. NBPE declared a \$0.31 per Share dividend on 28 January 2021 that was paid on 26 February 2021. On an annualised basis, this dividend payment represents a dividend yield of 2.8% based on the estimated 28 February 2021 NAV and 3.7% based on the London Stock Exchange closing price of £11.90 on 26 February 2021.
4. The diversification analysis by asset class and investment type is based on the fair value of underlying direct/co-investments and fund investments. The diversification analysis by year of investment, geography and industry is based on the diversification of underlying portfolio company investments at fair value as estimated by the Investment Manager. The year of investment is calculated at the portfolio company level and is defined as the date of capital deployment into a particular underlying investment. The diversification by year of investment also includes an allocation of net cash flows and valuation adjustments made since financial statements were last received from the investment sponsor. Accordingly, the actual diversification of the Company's investment portfolio and the diversification of the Company's investment portfolio on an ongoing basis may vary from the foregoing information. Included in the year of investment pie chart is a re-attribution of cash flows attributable to NB Investment Programs which shifted 3% of the value from 2016 (the date of the fund commitment) to 2020 (the date of the underlying commitment).
5. Direct equity investment diversification includes all equity, including associated equity from income investments.
6. Based on 28 February 2021 GBP/USD FX of \$1.398 and 31 January 2021 GBP/USD FX of \$1.373.
